-I-FUNCTION: Direct ligand for the ERBB tyrosine kinase receptors.

-I-FUNCTION: Direct ligand for the ERBB tyrosine kinase receptors.

The multiple isoforms perform diverse functions: cysteine-rich domain containing isoforms (isoforms 2-4) probably regulate the expression of nicotinic acetylcholine receptors at developing interneuronal synapses. The Ig-NRG isoform is required for the intial induction and/or maintenance of the mature levels of acetylcholine receptors at neuromuscular synapses.

-I-SUBCELLULAR LOCATION: Exists as a type I membrane protein and as a proteolytically released soluble growth factor form. The membrane-bound form does not seem to be active (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN=White leghorn; TISSUE=Brain; MEDLINE=93201602; PubMed=8453670; DOI=10.1016/0092-8674(93)90407-H; Falls D.L., Rosen K.M., Corfas G., Lane W.S., Fischbach G.D.; "ARIA, a protein that stimulates acetylcholine receptor synthesis, is a member of the neu ligand family."; cell 72:801-815(1993).

Yun J.-H., Koh Y.-S., Kim S.-J.;

Wan Jolevular cloning of the superoxide dismutase gene from Orientia tsutsugamushi, the causative agent of scrub typhus.";

J. Microbiol. 40.151-155(2002).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).

-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

-!- SIMILARITY: Belongs to the iron/manganese superoxide dismutase

| Sequence 1011, Application US/09925300
| Patent No. US20020151681A1
| GENERAL INFORMATION:
| APPLICANT: Craig Rosen,
| TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
| TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
| PILE REFERENCE: PAIO.
| CURRENT APPLICATION NUMBER: US/09/925,300
| CURRENT APPLICATION NUMBER: 2001-08-10
| PRIOR APPLICATION NUMBER: 60/124,200
| PRIOR PILING DATE: 1999-03-12
| NUMBER OF SEQ ID NOS: 1890
| SOFTWARE: PatentIN Ver. 2.0
| SEQ ID NO 1031
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 43;

```

The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel antibody, antibody derivative or antigen -binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal soncer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,

The invention relates to a novel antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as given in the specification. Also described are: a recombinant expression vector; a cell comprising a recombinant expression vector of (1);
New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibacterial; vaccine; antisense therapy; Staphylococcus epidermidis; recombinant expression vector; infection; computer readable medium;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel antibody, antibody derivative or antigen-
binding polypeptide that inhibits proteolytic release of a soluble
kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells.
The antibody, antibody derivative or antigen-binding polypeptide is
useful for treating or preventing renal disease or injury, e.g. renal
cancer. The antibody is also useful for inhibiting shedding of the KIM-1
polypeptide. This sequence represents a human KIM-1 mucin domain related
peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                        New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1. polypeptide, useful for treating or preventing renal disease or injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytostatic; gene therapy; antibody; antigen; antigen-binding; proteolytic release; inhibitor; kidney injury molecule-1; KIM-1; renal disease; injury; renal cancer.

producing an S. epidermidis polypeptide; an isolated nucleic acid
comprising a nucleotide sequence of at least 8 nucleotides in length; a
vaccine composition for prevention or treatment of an S. epidermidis
c infection, comprising a nucleic acid cited above and a carrier; treating
a subject for S. epidermidis infection, a recombinant or substantially
ure preparation of an S. epidermidis polypeptide or its fragment; a
vaccine composition for prevention or treatment of an S. epidermidis
infection; detecting the presence of a Staphylococcus nucleic acid in a
sample; a computer readable medium having recorded in it the nucleotide
sequences with SEQ ID NO: 1-3772 or its fragments; a computer based
system for identifying fragments of the Staphylococcus genome of
commercial importance; a computer based system for identifying fragments
commercially important nucleic acid fragments of the Staphylococcus
genome and/or plasmids; and identifying an expression modulating fragment
compositions of the present invention are useful for the diagnosis,
the staphylococcus genome and/or plasmids. The methods and
compositions of the present invention are useful for the diagnosis,
the fragment of an Staphylococcal epidermidis bacterial
infection. This is the amino acid sequence of a S. epidermis protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, digestive system antigen, gene therapy; cancer; appendicitis; ulcerative colitis; infection; Hirschsprung's disease; chronic colitis; digestive system disorder; Meckel's diverticulum.

The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschaprung's disease, chronic colitis or ulcerative colitis. The present sequence is a digestive system antigen of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of the digestive system, particularly cancer and cancer metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 46; DB 4; Length 49;

This sequence represents the cytoplasmic domain of rat cadherin-10. The invention specifically provides details of human cadherin-5, -8, -11, -12 and -13, and rat cadherin-8, -5, -11 and -13. Cadherins are calcium-capendent cell adhesion proteins. They are glycosylated integral membrane opendent cell adhesion proteins. They are glycosylated integral membrane proteins that have an N-terminal extracellular domain that determines contained by hydrophobic membrane spanning region and a C-terminal cytoplasmic domain, which is highly conserved among members of the superfamily. The C-terminal domain interacts with the cytoskeleton through extenins and other cytoskeleton-associated proteins. The novel cadherin proteins may be used in the analysis of the role of cadherins in investigation of the structure and function of cadherin. The cadherin proteins may be isolated by using anti-cadherin antibodies. These antibodies may also be used to modulate the activity of cadherin and to determine the tissue specific distribution of cadherin proteins. Each subclass of cadherins has a unique tissue distribution pattern. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the cytoplasmic domain of rat cadherin-10, which is a Ca2+ dependent cell adhesion protein. The rat cadherin CDNA was isolated from brain and retina cDNA by PCR, using degenerate primers designed to correspond to highly conserved sequences in the cytoplasmic domains of the mouse N-, E- and P-cadherins. The rat cDNA was then used to isolate the cDNA encoding its full length human homologue from a human foetal brain cDNA library. Antibodies or fragments that specifically bind the human cadherin can be used to purify the cadherin, determine its tissue expression and antagonise its ligand/antiligand binding activities. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WD40 repeat region; beta-transducin; protein-protein interaction; drug; intracellular signalling; protein kinase C; homology; motif; modulator; receptors of activated protein kinase; enzyme activity; isozyme; human.

The peptides AAR84928-R85063 and AAR85786-R85842 are peptides derived from the WD40 regions of a range of proteins (AAR85851-R85893) containing WD-40 (also called beta-transducin) amino acid repeat regions. The WD-40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               regions are involved in protein-protein interactions between proteins involved in intracellular signalling. An example of such an interaction is between protein kinase C and receptors of activated protein kinase (RACK), esp. RACK-1 (AAR85850). The proteins were isolated based on homology with beta-transducin or with its WD-40 consensus sequence. The peptides can be used to identify target proteins contg. WD-40 motifs, as modulators of enzyme esp. isozyme, activity of proteins involved in protein-protein interaction and to screen for drugs that will affect protein-protein interaction involving WD-40 domains. This peptide is derived from the repeat I from the YCU7 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                      New WD-40 (beta-transducin)-derived polypeptide(s) - which alter the activity of a protein, eg. protein kinase C, which interacts with a protein contg. a WD-40 region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  19.8%; Score 44.5; DB 2; Length 31; 40.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                         AAW08016-W08073 represent HIV peptides that can be used in the method of the invention is for determining whether or not a mother will transmit HIV-1 to a foetus. The method comprises incubating a sample from the HIV-1 to a foetus. The method comprises incubating a sample from the HIV-1 infected mother, with a collection of HIV peptides. The HIV peptides includes at least one gp41 derived peptide (see AW07918-W07928), and at least one HIV gp120 derived peptide (see AW07918-W07917). The number of peptides that react with the sample is determined, and this number is compared with a standard that shows pattern reactivity for a patient of transmission status. A nontransmission and peptides as the standard. The method detects the presence of neutralising antibodies that protect against mother to infant transmission of HIV. These sequences can also be used in vaccines to used for passive immunisation, and to generate anti-idiotypic antibodies to used for passive immunisation, and to generate anti-idiotypic antibodies for use in vaccines or active immunotherapy.                                                                                               proteins, called protested antiqens, given in ABB5533 to AAB57302. The prostate cancer antiqens, given in ABB5633 to AAB57302. The prostate cancer antiqens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, valnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infections diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Rat cadherins-7 was isolated from a rat brain and retina cDNA library using degenerate PCR primers designed from highly conserved segments in the cytoplasmic domain of mouse N·, E, and P cadherins. See also AAR43564-7. (Updated on 25-MAR-2003 to correct PN field.)
method of the invention has immunostimulant, virucide, antibacterial, antiparasitic and cytostatic applications and may be useful during vaccine production and for treating immune disorders including viral, bacterial and parasitic infections, prion diseases, neoplastic diseases as well as providing protection against toxins. The current sequence is that of the OSPF-related SIV envelope (Env) peptide of the invention.

This sequence represents the cytoplasmic domain of rat cadherin-7. The invention specifically provides details of human cadherin-5, -8, -11, -12 and -13, and rat cadherin-8, -5, -11 and -13. Cadherins are calcium—capendent cell adhesion proteins. They are glycosylated integral membrane proteins that have an N-terminal extracellular domain that determines binding specificity, a hydrophobic membrane spanning region and a C-terminal cytoplasmic domain, which is highly conserved among members of the superfamily. The C-terminal domain interacts with the cytoskeleton through eatenins and other cytoskeleton associated proteins. The novel cadherin proteins may be used in the analysis of the role of cadherins in threstigation of the structure and function of cadherin. The cadherin proteins may be isolated by using anti-cadherin antibodies. These antibodies may also be used to modulate the activity of cadherin and to determine the tissue specific distribution of cadherin proteins. Each subclass of cadherins has a unique tissue distribution pattern. (Updated on 25-MAR-2003 to correct PP field.)

A;Title: Chloroplast and cytosol isozymes of CuZn-superoxide dismutase: their characterif
A;Reference number: A61531
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A,Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen & C,Superfamily: superoxide dismutase [Cu-Zn] C,Keywords: copper; cytosol; metalloprotein; oxidoreductase; zinc F;44,46/Binding site: copper (His) #status predicted
                                       A)Genome: chloroplast
C;Function:
A;Description: catalyzes the reaction of carbon dioxide with D-ribulose 1,5-bisphosphate
C;Superfamily: ribulose-bisphosphate carboxylase large chain
C;Superfamily: calvin cycle; carbon dioxide fixation; carbon-carbon lyase; carboxy-lyase; c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: UNIPROT:Q8ZA17; GB:AL590842; PIDN:CAC93282.1; PID:g15981729; GSPDB:GR:C;Genetics:

A; Title: Amino acid compositions and partial sequences of xylanases from a new subspecies A; Reference number: PQ0202; MUD:92118324; PMID:1368735
A, Rocession: PQ0202
A, Molecule type: protein
A; Residues: 1-40 cTSU-
A; Cross-references: UNIPROT:09R5P8
A; Experimental source: subsp. alba OPC-18
C; Comment: This enzyme is important for the breakdown of xylan.
C; Function:
A, Pescription: catalyzes the hydrolysis of 1,4-beta-xylosidic linkages in xylans
A; Pathway: xylan degradation
C; Superfamily: endo-1,4-beta-xylanase; endo-1,4-beta-xylanase homology
C; Keywords: glycosidase; hydrolase; polysaccharide degradation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Search completed: June 29, 2005, 09:47:29

ALIGNMENTS

New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury, e.g. renal cancer.

Disclosure, Fig 1A; 42pp; English.

The invention relates to a novel antibody, antibody derivative or antigen -binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is cancer. The antibody is also useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel antibody, antibody derivative or antigen-binding polypeptide that inhibits proteclytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                             The invention relates to a novel antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention

The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits proteclytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal ancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits protecolytic release of a soluble kidney injury molecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury,

```
The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Helae cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithalial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                      Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a single exon nucleic acid probe for measuring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide #8371 encoded by human foetal liver single exon probe.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel antibody, antibody derivative or antigen binding polypeptide that inhibits proteolytic release of a soluble kidney injury moblecule-1 (KIM-1) polypeptide from KIM-1-expressing cells. The antibody, antibody derivative or antigen-binding polypeptide is useful for treating or preventing renal disease or injury, e.g. renal cancer. The antibody is also useful for inhibiting shedding of the KIM-1 polypeptide. This sequence represents a human KIM-1 mucin domain related peptide of the invention
                                                                                                                                                                                                                                                                               New antibody, antibody derivative or antigen-binding polypeptide that inhibits proteolytic release of a soluble kidney injury molecule-1 polypeptide, useful for treating or preventing renal disease or injury, e.g. renal cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #6765 encoded by probe for measuring cervical gene expression.

                 single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #8669 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                           Gaps
     gene expression in a sample derived from human foetal liver.

                                                                                                                                                                                                                By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                              The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see MARAISS). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7
                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                               Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human brain expressed single exon probe encoded protein SEQ ID NO: 33829.

They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                         exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ..
